

COPPER'S CONTRIBUTION TO THE CIRCULAR ECONOMY

Sustainability and climate change present growing challenges for policy makers, businesses, and society. Regulators are adopting policies intended to break the link between economic growth and the use of natural resources. Industries are making new products and systems that need fewer materials, but still satisfy customer expectations. Society, both businesses and citizens, needs to be much more aware of the importance of returning end-of-life products back into recovery and recycling.

This infographic shows how copper supports the circular economy.
